| Abstract | The proposed project, following a pilot phase in 2022, wants to <br> contribute to meet the ambitions set by rare 2030 concerning <br> data. Despite the fact that the Orphanet nomenclature already <br> exists and is freely available in computable formats, the real- <br> life implementation in health information systems is challenging <br> due to the heterogeneity of coding systems and practices, and <br> tools. The experience from the RD-CODE project, supporting <br> diverse implementation models in four MS, taught us that local <br> support in local language for coders and technical teams is <br> necessary to achieve proper implementation in compliance <br> with good practice guidelines for coding and to therefore <br> increase data quality and comparability. To address those <br> needs, it is important to maintain the Orphanet nomenclature of <br> rare diseases, and to improve it building on the well organised |
| and structured rare disease expertise laying in ERNs, to |  |
| increase its interoperability with other terminologies in use in |  |
| different countries and in registries, and to contribute to the |  |
| adoption and implementation, starting by the hospitals involved |  |
| in ERNs by setting up a Network of National Orphanet |  |
|  | Nomenclature Hubs in 19 MS and finally facilitate evidence |
| based decision through exploitation of the Orphanet |  |
| Knowledge base linked to the ORPHAcodes. |  |
